

# Weather Tag

## How do I correctly place my Weather Tag ?

The base of your Weather Tag must not be placed on a metallic item, it can disturb the operation of your accesory.

Before placing your Weather Tag, make sure to respect the maximum allowed distance with Bluetooth Smart®, namely maximum 20m.

Furthermore, please note that the base attachment patch adheres very well. Make sure to find the right place before fixing it permanently. Also note that in case of moving out, it could damage your wallpaper or the paint on removal.
