HotKnot & Android Beam

What is HotKnot and how to turn it on?

HotKnot technology allows wireless information transfer between two compatible devices. Compared to other wireless technologies, the maximum distance between the two devices should not exceed few centimeters.

HotKnot allows mainly to:

- transfer files (music, photos etc...)
- share information (contacts, game data etc...)

To activate HotKnot, go to the All Apps section ⊞ and open **Settings** > 🗗
HotKnot. Slide the switch to the ON position. An icon is displayed in the status bar.
