WiFi

Why does my WiFi cut out when my device is sleeping?

Android™ lets you set up the standby of your WiFi connection according to how you use it. To check the setup on your device, go to [icon] (or [icon]) **Settings** >

Wireless and networks > **WiFi** and tap [icon] Menu > advanced.

Then select Keep Wi-Fi on during sleep to set up the sleep mode:

- Always : WiFi turns off as soon as the screen turns off.
- Only when plugged in: WiFi stays on as long as the device is in charge, even if screen is off.
- Never (increase data usage) : WiFi never goes into sleep mode.
