Wireless Connections Why don't I have a 4G connection when my network is correctly set up?

You need to be in an area covered by the 4G network of your mobile network provider.

Make sure you have subscribed to a 4G option in your mobile contract and that <u>data</u> <u>roaming</u> is activated on your device.

You may need to activate the 4G option yourself in the user account secction on your mobile network provider's website.
