

Weather Station

Why is there any interactions between the modules and the Weather station application ?

Are they connected to your ARCHOS Weather Station ?

You can check this info  **Menu** > Station configuration > Your station > Sensors

Weather Station

Name
Igny

ID
00037F0001C8

Location
Igny (48.73753° / 2.22286° / 92m)

Sensors
Add or remove a sensor

CO2 calibration
Calibrate the air quality meter of the station

Make sure your WiFi is activated. Check if the batteries of the soil module and the external module are not empty. If they are empty, replace them.

Make sure your sensors are not installed far away from your main module. The Weather station range is around 50 meters.

Unique solution ID: #1785
