

Music Light

What are the conditions to use the Music Light ?

The Archos Music Light is a connected light that includes a loudspeaker.

Install the lamp in a lighting system supporting a E27 screw base. The device that is connected to the lamp must be compatible with the Bluetooth® 2.0 technology. It can be a device running with the Android, iOS or Windows operating system.

The maximum distance between the ARCHOS Music Light and the device is 10 meters. Beyond that distance, the connection is lost.

We advice you not to use your ARCHOS Music Light with a power inverter.
